11th doctor sonic screwdriver Basically, problem_1_table is a table that contains the (user_id, score) pair for

submissions with `problem_id = 1`, and so on. Afterwards, we join with them on the `user_id` to produce the table we want. In fact, this was our original approach to the problem! The website was built with Ruby on Rails, and we used a loop in Ruby to loop through all problems and generate the corresponding SQL query.
