1588 timing pdf

1588 timing In the operation of Carrier-Class communication networks, secure and accurate timing is absolutely vital. When something means this much to your business and meeting the needs of your customers, compromise is simply not an option. We have Microsemi IEEE 1588 Precision Time Protocol (PTP) clocks ready to ship today!

1588 timing The Precision Time Protocol (PTP) is a protocol used to synchronize clocks throughout a computer network. On a local area network, it achieves clock accuracy in the sub-microsecond range, making it suitable for measurement and control systems. PTP is currently employed to synchronize financial transactions, mobile phone tower transmissions, sub-sea acoustic arrays, and networks that require ...

1588 timing IDT offers the broadest and deepest silicon timing portfolio in the industry. In addition to our wide offering of buffers and clock synthesizer products, we deliver leading-edge system timing solutions to resolve timing challenges in wireless infrastructure, networking, data centers and consumer applications.

1588 timing This standard defines a protocol enabling precise synchronization of clocks in measurement and control systems implemented with technologies such as network communication, local computing and distributed objects. The protocol is applicable to systems communicating by local area networks supporting multicast messaging including but not limited to Ethernet.
