determination of 5,7-dihydroxychromone and luteolin in peanut hulls by capillary electrophoresis with a multiwall carbon nanotube poly ethylene terephthalate composite electrode spectrophotometric determination of chromium based on oxidation of organic compounds 5-7 and on formation of ion associates 8 has the disadvantages of a high blank value. The other reagents to determine chromium by diazo-coupling reaction are p-aminophenol, Isonipecotamide and Isatin 9.

determination of 5,7-dihydroxyflavone and luteolin in peanut hulls by capillary electrophoresis with a multiwall carbon nanotube poly ethylene terephthalate composite electrode Maximum absorbance was observed in (50 ± 2%) (v/v) ethanol/water medium, hence, a 50% ethanol solution was used in the determination procedure. It was observed that 50-70% (5-7 mL) ethanol produced a constant absorbance of the Zn-chelate (Fig. 2). For all subsequent measurements, 50% (5 mL) of ethanol was added.

#### **A Simple Spectrophotometric Method for the Trace**

determination of 5,7-dihydroxyflavone and luteolin in peanut hulls by capillary electrophoresis with a multiwall carbon nanotube poly ethylene terephthalate composite electrode Sometimes the biggest barrier to self-determination is the attitude of other people. Scott talks about his concern with the assumption that people make about his level of understanding, without getting a chance to know him.
