modeling study of growth and potential geohazard for lusi mud volcano east java indonesia Highlights Modeling the growth of three different strains of Salmonella and L. monocytogenes. Primary and secondary modeling of growth rate and lag time in mix of lettuces. Salmonella grew faster than L. monocytogenes in the temperatures tested (7–30 °C). L. monocytogenes showed higher lag times at 7 and 10 °C than Salmonella enterica. Secondary modeling for both pathogens showed a linear ...

modeling study of growth and potential geohazard for lusi mud volcano east java indonesia 2.2 Mathematical description of leaf growth. The development of venation patterns is correlated with the growth of leaf blades. Growth can be characterized by the growth tensor $\dot{\mathbf{e}}_d$ [Hejnowicz and Romberger 1984], which specifies the magnitude of the expansion of infinitesimal surface regions in var-

Modeling and visualization of leaf venation patterns

modeling study of growth and potential geohazard for lusi mud volcano east java indonesia A dataset newly

released by the United Nations' Food and Agriculture Organization (FAO) shows that, in recent years, farmers in developing countries have invested approximately 153 billion USD annually on agricultural capital—similar to the \$156 billion estimate of investments made by farmers in developed countries (1). (Further details on private investments in Appendix S1).
