versatile synthesis and biological evaluation of 1,3-diamino substituted 1,25-dihydroxyvitamin D<sub>3</sub> analogues  
Up-converting rare-earth nanophosphors (UCNPs) have great potential to revolutionize biological  
luminescent labels, but their use has been limited by difficulties in obtaining UCNPs that are biocompatible.  
To address this problem, we have developed a simple and versatile strategy for converting hydrophobic  
UCNPs into water-soluble and carboxylic acid-functionalized analogues by directly ...

Antimetabolites are extremely useful for the treatment of cancers and viral infections and are one of the  
largest classes of drugs. Most antimetabolite drugs are nucleoside derivatives that substitute for endogenous  
nucleosides and prevent DNA and protein replication. Many of the drugs described by the World Health  
Organization as "essential medicines" are nucleoside derivatives and nearly 20% ...

Quinoline ring has been found to possess antimalarial, anti-bacterial, antifungal, anthelmintic, cardiotoxic, anticonvulsant, anti-inflammatory, and analgesic activity. Quinoline not only has a wide range of biological and pharmacological activities but there are several established protocols for the synthesis of this ring.

the importance of this ring for the biological activity of cortistatins. This led us to develop a novel and versatile synthesis of substituted isoquinolines. In our method, lithiated o-tolualdehyde tert-butylimines were condensed with different nitriles to generate enamide anion intermediates, which were trapped in situ with various
